# CAPABILITY STATEMENT

**INTRODUCTION:**

CAF is a multi-disciplined company providing professional engineering, project management and surveying services to markets including water infrastructure, agribusiness, rural and urban development, transport, resources, energy and building.

Established in 2008, CAF has a team of highly developed individuals that bring with them experience and process developed over 30 years from small local boutique private consultants to large domestic and international engineering consulting firms. Our specialised services include:

- water infrastructure engineering including irrigation modernisation projects
- civil engineering
- farm development planning
- surveying
- project management
- urban design
- environment and sustainability
- planning and landscape architecture.

CAF's team have worked across the globe on a range of high profile projects and in multiple disciplines. From this experience they bring world class delivery and solutions to projects key to their core capability. Quality of execution is fundamental to success and CAF is uncompromising in delivering on these values.

Utilising the vast and diverse industry experience CAF has bought together under the newly formed company, and with head office in the regional Victorian hub of Shepparton, CAF can ultimately deliver quality, efficient and value for money solutions to a standard unsurpassed by other major engineering consultancy firms.

**CLIENTS:**

CAF services a full range of clients including federal, state and local governments, private and public companies, managed investment schemes, organisations and individuals.

CAF's senior management team has endured past success through developing long-term relationships with clients based on mutual understanding, respect and trust. As a newly formed company, these qualities are firmly entrenched in CAF's company ethos, ensuring service to existing and future clients consistently meets the high standards achieved through past success.

Through integration of our core consultation capability, we strive to develop and deliver engineering design solutions that are cutting edge in an environment where innovation, quality, safety and value for money are paramount to our client's success.
